SUMMARY

Bachelor Of Technology Computer Science student (2027) building AI-driven, customer-facing software in Python and TypeScript. Shipped 4 full-stack projects spanning NLP, LLM integration, and containerized deployment. Seeking an SDE internship at Amazon to build scalable systems that solve real customer problems.

PROFESSIONAL EXPERIENCE

AI Product Associate Intern 07/2026 – 09/2026
https://colorithm.ae Sharjah, UAE
(Remote)

- Contributed to the development of "Intentick," an AI-powered lead capture and customer engagement platform, translating AI technologies into practical business solutions.
- Collaborated directly with Product Management and Technology teams to drive requirements analysis, product operations, and technical documentation.
- Utilized Natural Language Processing (NLP), Vector Search, Intent Detection, and Prompt Engineering to optimize AI chatbot workflows and API integrations.
- Conducted functional testing and product analysis, managing cross-functional development workflows using Jira, and Trello.

PROJECTS

PriorityAI : E-Commerce Feature Prioritization Engine 09/2026 – Present

- Engineered an NLP(Natural Language Processing) model using BERT (Bidirectional Encoder Representations from Transformers) to analyze unstructured customer reviews and group similar complaints by urgency.
- Applied the RICE framework to calculate the commercial risk and engineering effort of each issue, creating a dashboard that turns raw feedback into prioritized product decisions.

Job Application Tracker (Chrome Extension) 08/2026 – 09/2026

- Engineered a custom browser extension to directly capture job application details from web pages, streamlining the tracking of application life cycles.
- Automated administrative tasks by creating a centralized system to monitor submission statuses and organize follow-up communications.

CallForge: AI Voice Agent Platform 06/2026 – 07/2026

- Architected a scalable, Dockerized conversational AI platform in TypeScript designed to simulate and analyze real customer interactions.
- Automated lead qualification and call-performance tracking, demonstrating how agentic AI can resolve sales pipeline bottlenecks.

MailMind: AI-Powered Communications Assistant 04/2026 – 05/2026

- Developed a Next.js web application integrating OpenAI and Gmail APIs to automate email summarization and extract critical business information from complex threads.
- Built context-aware communication features to streamline stakeholder correspondence and significantly reduce manual inbox management.

CERTIFICATES

Unleashing the Power of AI – Dubai AI (omp.dub.ai)

AI application, prompt engineering, and leveraging artificial intelligence for modern problem-solving within a UAE-focused framework

Data Analytics Job Simulation – Deloitte (Forage) | Jan 2026

Skills: Data analysis, forensic technology.

Data Science Job Simulation – British Airways (Forage) | Jan 2026

- *Skills:* Customer behavior prediction modeling, operations data analysis.

Operations Job Simulation – Goldman Sachs (Forage) | Jan 2026

Skills: Foundations of operations, facilitating high net worth transactions.

SKILLS

AI & Data Analytics

Prompt Engineering, Natural Language Processing (NLP), OpenAI APIs, Data Analysis.

Core Competencies

Cross-Functional Leadership, Structured Problem-Solving, High Learning Agility, Adaptability, Team Management

Tools & Platforms

Docker, Jira, Trello, Google Analytics, Git

Software Development

JavaScript, TypeScript, Python, React Native, Next.js, HTML ,CSS

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Srinivas Institute of Technology , Mangalore , India [2023 - 2027]

- **Academic Excellence:** Current CGPA: 9.50/10 (Demonstrated consistent upward trajectory across 6 semesters, with peak semester GPAs of 9.83 and 9.75).
